01. Project Description

02. Features

03. PROJECT Website Overview

04. Our Team

1-PROJECT DESCRIPTION

For our final project, our team wants to create a cinema booking website.

On this site, customers should be able to create an account and book their seats for their favorite movie.

When they make their reservation, they can select which time they want to book. Then, they are going to receive a reservation confirmation by mail

2-FEATURES

JAVA CLASS

```
package ucy.ece318.assignment3;

import java.sql.*;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.web.bind.annotation.*;
import org.springframework.web.servlet.view.RedirectView;

@RestController
public class CustomerController {

    @Autowired
    final static String DB_URL="jdbc:mysql://sql7.freemdb.com/sql7530714";
    final static String USER = "sql7530714";
    final static String PASS = "GMPQEGUOTC";
    static Statement stmt;
    static Connection connection;

    public static void connectToDatabase(){
        try {
            Class.forName(className: "com.mysql.jdbc.Driver");
            connection = DriverManager.getConnection(DB_URL, USER, PASS);
            stmt=connection.createStatement();
        } catch (Exception e) {
            e.printStackTrace();
        }
    }
}
```

**Customer
Controller class
that handles DB
and customers**

```
package ucy.ece318.assignment3;

import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.GenerationType;
import javax.persistence.Id;

@Entity
public class Customer {

    @Id
    @GeneratedValue(strategy = GenerationType.AUTO)
    private int id;
    private String name;
    private String surname;
    private String password;

    public Customer(String n, String sn, String ps wrd){
        name = n;
        surname = sn;
        password = ps wrd;
    }
}
```

**Customer class
for the
characteristics
of a Customer**

2-FEATURES

CLASS MAPPING

2-FEATURES

REST MAPPING

```
@GetMapping("/addCustomer")
public RedirectView addCustomer(@RequestParam final String userName, @RequestParam final String userPassword) {
    connectToDatabase();
    ResultSet rs = tableInfo(Query: "SELECT COUNT(Customer_id) FROM Customer");
    int custID=rs.getInt(columnIndex: 1)+1;
    updateTable("INSERT INTO Customer values("+custID+",\'"+userPassword+"\',\'"+userName+"\')");
    disconnectDB();

    return new RedirectView(url: "");
}
```

This mapping uses the database, and insert a new customer into it

2-FEATURES

GRAPHICAL USER INTERFACES

```
<script type="text/javascript">
$(document).ready(function(){
    var width = 1000;
    height = 570;
    var numberOfBlinds = 1;
    var margin = 0;
    var color = '#000';
    gapHeight = 0;

    var container = $('#container');

    container.width(width).height(height);
    var blindWidth = width / numberOfBlinds;

    images = new Array();
    $('ul li', container).each(function() {
        images.push($(this));
    });

    images[0].addClass('active');
    activeImage = 0;

    for (var i = 0; i < numberOfBlinds; i++) {
        var tempEl = $(document.createElement('span'));
        var borders = calculateBorders();

        tempEl.css({
            'left': i * blindWidth,
            border: margin + 'px solid ' + color,
            borderTop: borders.borderWidthTop + 'px solid ' + color,
            borderBottom: borders.borderWidthBottom + 'px solid ' + color,
            'height': height,
            'width': blindWidth
        });

        container.prepend(tempEl);
    }
});
```

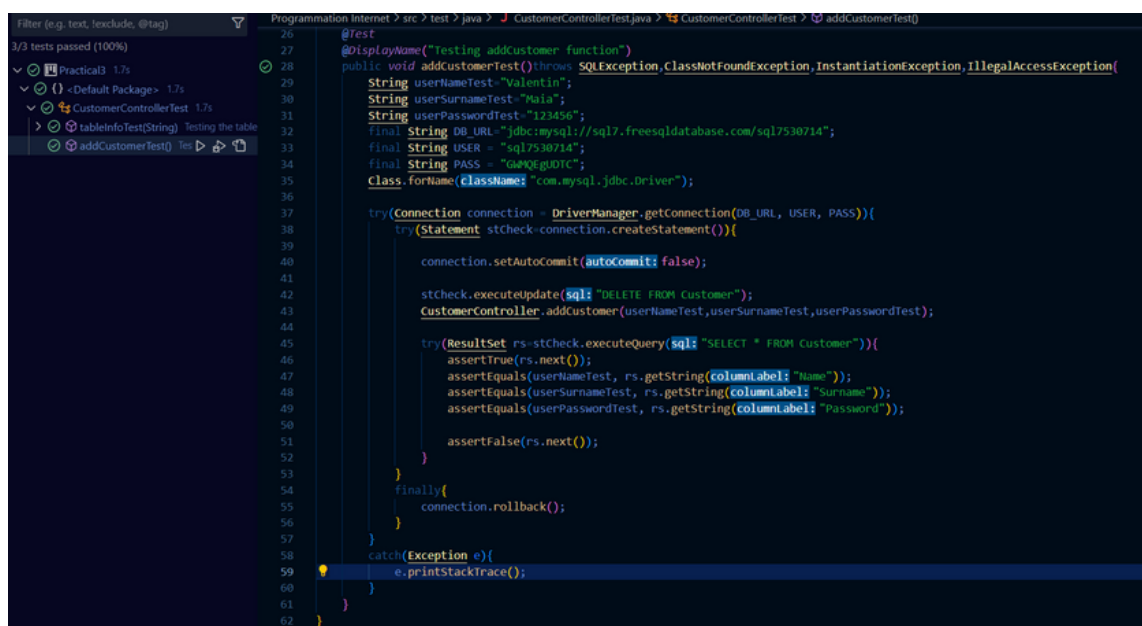

In this script, the movie posters defile one after the other with a fluid animated transition.

Highlights

2-FEATURES

J-UNIT TEST

```
26 @Test
27 @DisplayName("Testing addCustomer function")
28 public void addCustomerTest() throws SQLException, ClassNotFoundException, InstantiationException, IllegalAccessException {
29     String userNameTest = "Valentin";
30     String userSurnameTest = "Mala";
31     String userPasswordTest = "123456";
32     final String DB_URL = "jdbc:mysql://sql7.freesqldatabase.com/sql7530714";
33     final String USER = "sql7530714";
34     final String PASS = "GmQEGu0TC";
35     Class.forName("com.mysql.jdbc.Driver");
36
37     try (Connection connection = DriverManager.getConnection(DB_URL, USER, PASS)) {
38         try (Statement stCheck = connection.createStatement()) {
39             connection.setAutoCommit(false);
40
41             stCheck.executeUpdate("DELETE FROM Customer");
42             CustomerController.addCustomer(userNameTest, userSurnameTest, userPasswordTest);
43
44             try (ResultSet rs = stCheck.executeQuery("SELECT * FROM Customer")) {
45                 assertTrue(rs.next());
46                 assertEquals(userNameTest, rs.getString(columnLabel: "Name"));
47                 assertEquals(userSurnameTest, rs.getString(columnLabel: "Surname"));
48                 assertEquals(userPasswordTest, rs.getString(columnLabel: "Password"));
49                 assertFalse(rs.next());
50             }
51         } finally {
52             connection.rollback();
53         }
54     } catch (Exception e) {
55         e.printStackTrace();
56     }
57 }
```

In the function shown above, we test the addCustomer function. In order to do so, we add a customer in our database, and then check if the data in the database are the same as the ones we used at the beginning.

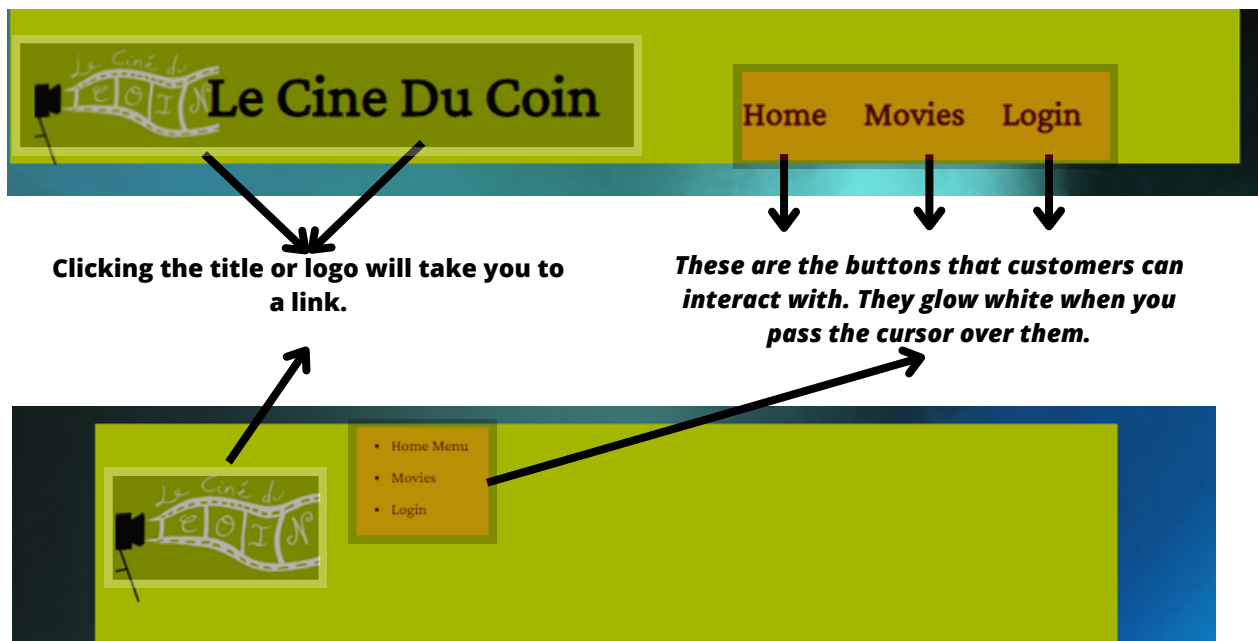

3-PROJECT WEBSITE

OVERVIEW

Header And Footer

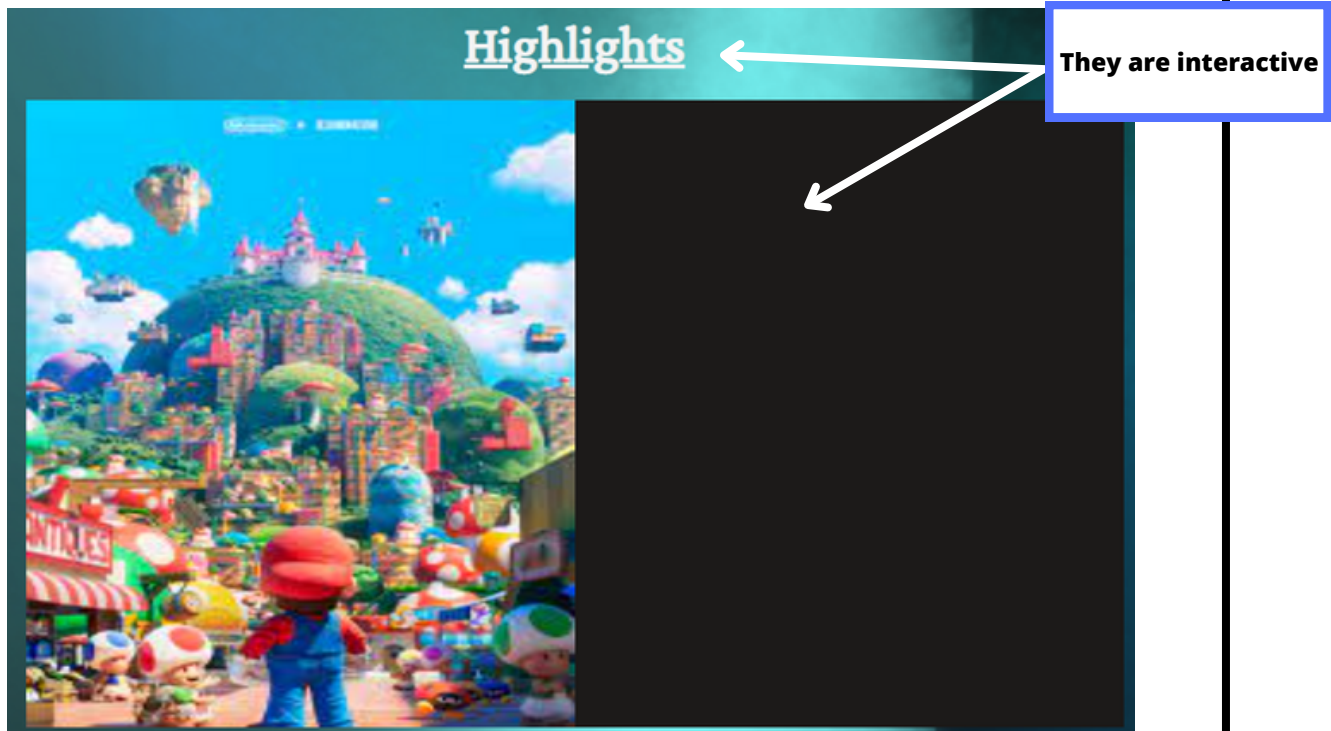

Customers can access the menu by clicking the buttons listed here: Home, Movies, and Login to access different links. (Currently, we don't have enough servers to upload new pages)

3-PROJECT WEBSITE OVERVIEW

Highlight

**With the help of JavaScript, pictures of movies are displayed with a timer transition animation.
The title and the board are clickable.**

3-PROJECT WEBSITE

OVERVIEW

Movies

Here you will find movie posters, titles, genres, synopses, and schedules for each screening.

The entire block is interactive. You can book a seat for the movie by clicking the different schedule buttons.

Clicking on it updates the database and books a place for the customer (see in the next page).

When you pass the cursor over the block, it changes color.

3-PROJECT WEBSITE

OVERVIEW

Login

The customer can register on our site and create an account here.

There are three blocks associated with Name, Surname, and Password. In the corresponding section, customers can enter different information. By clicking on the submit button, the account is now created with the current information.

The screenshot shows a web form with a teal header containing the word 'Login'. Below the header, on a yellow background, is the text: 'Want to become one of us? or Login if you are a member Come and subscribe to us'. There are four input fields: 'Name' (with placeholder 'Your name'), 'Surname' (with placeholder 'Your Surname'), 'Password' (with placeholder 'Your Password'), and another 'Password' field (with placeholder 'Your Password'). A blue 'Submit' button is at the bottom. A blue box on the left points to the first three fields, and a blue box on the right points to the 'Submit' button.

Insert the information in the following segment

Click on this button to create an account with the current informations

3-PROJECT WEBSITE

OVERVIEW

+ Options

		Customer_id	Password	Name	Surname
<input type="checkbox"/>	 Éditer  Copier  Supprimer	1	1223344444	Kylian	Mbappe
<input type="checkbox"/>	 Éditer  Copier  Supprimer	2	SDKFNH3G839IO2	Randal	Kolo Muani
<input type="checkbox"/>	 Éditer  Copier  Supprimer	3	204EDKNSKD	Didier	Deschamps

Before

Want to become one of us? or Login if you are a member
Come and subscribe to us
Your name:

Cristiano
Ronaldo
imTheGoat

Submit

We can see by adding a customer on the website that the customer is correctly added in the database.

4-OUR TEAM

Alexandre NGUYEN

Role: Web Designer, HTML, CSS, Website animation with Javascript, Report manager, GitHub manager

Description: My dream is to become a neural IT engineer, someone who wants to fuse our brains with machines.

Valentin MAIA

Role: SQLDatabase, UML Diagram

Description: Since i'm a kid I always wanted to be an engineer. It was always interesting to know more about this incredible field.

Jason GOUVET

Role: Rest/React/Java (mapping)

Description: As long as I can remember, I always loved to play with electronic systems. My goal is to be an embedded systems engineer.

William Travers

Role: Java/JUnit Test/SQL/React

Description: I've always wanted to be an engineer. Since my childhood I'm following the steps of my father.
